StarDrop can be connected to Pipeline Pilot in a number of ways. The StarDrop client contains a standard dialogue that enables you to connect to a Pipeline Pilot server and run a protocol, passing data to, and receiving results from, the process. In addition, the [ADME QSAR Models](#) can be made available via a web service making them accessible within a Pipeline Pilot protocol. Take a look at the [Downloads](#) section for [example Pipeline Pilot protocols](#) that can be run from within StarDrop.
