---

In this presentation, Alan Beresford discusses drug discovery and considers how ADME models fit into the process as a step necessary for helping to manage the numbers game. Alan describes how, by using appropriate interpretation of ADME model results, it is possible to credibly include them within a traditional screening cascade.

This presentation was given at the MedChem USA Conference in 2007.

These are the slides that Alan presented:

A copy of Alan's slides are available as a [PDF](#) file.
