

Card View™ - Hit List Triage

Written by Edmund Champness

Wednesday, 16 October 2013 20:50 - Last Updated Monday, 10 September 2018 17:01

In this example Card View™ is applied to the results from a kinase project in which a large screening campaign has resulted in a hit list. The project team wish to evaluate the list to identify the chemotypes within and focus their resources on a small number of series that have demonstrable SAR at the target and are most likely to yield high quality leads with appropriate physicochemical and ADME properties.
