We presented this webinar on 24 February 2016, in which we discussed how you can ensure that you don't miss valuable opportunities due to the criteria used to select compounds in your project. We presented a method for analysing the sensitivity of the prioritisation of compounds to a multi-parameter profile of property criteria, showed how the results can be easily interpreted and illustrated how this analysis can highlight new avenues for exploration.

We have also [published a paper](#) with full details of this method and example.
