

## Translational Toxicology: Data visualisation across phases

Written by Aishling Cooke

Wednesday, 13 May 2020 08:32 - Last Updated Wednesday, 13 May 2020 08:47

---

Held on 12 May 2020.

This webinar was presented by Aishling Cooke and Matthew Segall.

This webinar focused on the design of visualisation software for translational toxicology, with particular reference to the challenges that the many different sources of toxicology data pose. We outlined our work on a visualisation application for the EU project, eTRANSafe, which aims to build a large software system for investigating translational toxicology. We discussed the challenges in developing a tool which allows users to explore these data concurrently, without intensive transformation of data by the end-user.
