Held on 8 September 2020.

Multi-parameter Optimisation in Practice

This webinar was presented by Ed Champness, Tim Hohm and John Norman.

In this webinar you can hear how you can quickly find high-quality compounds for your projects.

We described how a safe and efficacious drug must possess a balance of potency with appropriate ADME and toxicity properties. The ideal property profile will be different for every project, depending on the therapeutic indication, intended route of administration and commercial factors; the goal of a drug discovery project is to target compounds that are likely to achieve this delicate balance as quickly as possible. We will discuss how you can achieve this in practice, illustrated with case studies and interactive examples.
